A role for public and social investment in EU economic governance

Mario Pianta
Università di Urbino

Intereconomics conference “New growth for Europe”
Berlin, 10 October 2016
Europe’s crisis: a problem of demand

Since 2008:
Private investment has fallen, no recovery
Public expenditure has been reduced, Deficit $\rightarrow 0$
Exports now grow less than world GDP
Consumpt: with record income inequality, lower dynamics

With no demand growth, no GDP growth
Where do we start?

- **Investment**
  
  but *private* investment is pro-cyclical, no effect of QE when demand is missing

- **Public investment**
  
  is a key policy tool, already used by Juncker plan increases demand, improves supply structure

- **Social investment**
  
  can improve economic growth, social cohesion, environmental quality, reduce inequality
Total Investment as % of GDP

- China
- ASOC (excl. China & India)
4 reasons for a new EU public investment policy

1. Macroeconomics: could provide demand, ending the stagnation, reduce debt/GDP ratios

2. Structural: adapt Europe’s economic structure with rise of new, environmentally sustainable, knowledge intensive, high skill/wage activities,

   a. Environmental sustainability
   b. Knowledge intensive applications of ICTs
   c. Health and welfare services
4 reasons

3. Cohesion
Inequality and social disparities could be reduced. Within the EU, centre-periphery divides (national and regional) could be limited.

4. Ecological sustainability
Reduce use of non-renewable resources/energy, protecting ecological systems, lowering CO2/other emissions, reducing waste, recycle,

Need for new EU policy and governance arrangements is this field
1. The macroeconomic argument

Very large consensus:

- IMF World Economic Outlook 2014
- Summers
- Juncker Plan
For economies with clearly identified infrastructure needs and efficient public investment processes and where there is economic slack and monetary accommodation, there is a strong case for increasing public infrastructure investment. Moreover, evidence from advanced economies suggests that an increase in public investment that is debt financed could have larger output effects than one that is budget neutral, with both options delivering similar declines in the public-debt-to-GDP ratio. This should not,
Figure 3.5. Effect of Public Investment in Advanced Economies
(Years on x-axis)

Public investment shocks have a statistically significant and long-lasting effect on output. They also typically reduce the debt-to-GDP ratio, though the decline in debt is statistically significant only in the short term. The level of private investment rises in tandem with GDP.

(Figure 3.6, panels 1 through 4). During periods of low growth, a public investment spending shock increases the level of output by about 1½ percent in the same year and by 3 percent in the medium term,
IMF, 2014

- The golden rule excluding public investment from fiscal consolidation works

Improvements in fiscal institutions and some fiscal rules could help protect public investment during periods of fiscal consolidation.

Budget rules also affect public investment spending, especially in the case of the so-called golden rule of public finance. This rule calls for excluding net investment spending from the budget balance against which implicit or explicit fiscal discipline targets are applied.
“There is a consensus that the US should substantially raise its level of infrastructure investment. Economists and politicians of all persuasions recognise that this can create quality jobs and provide economic stimulus without posing the risks of easy-money policies in the short run”.

“An increase in investment of 1% of GDP over a decade would total $2,200 billion”

“Infrastructure investments pay for themselves by expanding the economy and increasing the tax base. The McKinsey Global Institute has estimated a 20% per cent rate of return. If it is only 6% and the government collects about 25 cents on every dollar of GDP, it will earn 1.5% on investments, more than the real cost of borrowing over a horizon of 30 years. Debt financing of new infrastructure investment would be entirely reasonable”.

Government borrowing costs are much lower than the returns demanded by private-sector investors”
What has Europe done?
Assessing the Juncker investment plan

1. Bruegel

*Assessing the Juncker Plan after one year,*
by G. Claeys, A. Leandro, 17 May 2016

- Little additionality, little novelty in the projects funded so far
- “EFSI should only be used for really innovative and risky projects that cannot find funding at the moment because of market failures” EIB should increase its share of capital in the high risk projects and lower it in the others
2. Ofce

PROBABLY TOO LITTLE, CERTAINLY TOO LATE

AN ASSESSMENT OF THE JUNCKER INVESTMENT PLAN
M. LE MOIGNE, F. SARACENO, S. VILLEMOT
OFCE WP, March 2016

Simulation of the macroeconomic impact, using DSGE model

“We found that had the Juncker plan been implemented in a timely manner, it would have helped to significantly shorten the recession”.

“EU authorities should have implemented a much bolder plan. As it is, the Juncker plan is likely not going to be effective at all.”
2. The structural argument

Intereconomics Forum, 50, 3, 2015

- Which Industrial Policy Does Europe Need?
  Mariana Mazzucato, Mario Cimoli, Giovanni Dosi, Joseph E. Stiglitz, Michael Landesmann, Mario Pianta, Rainer Walz, Tim Page

- Divergence in economic activities, greater imbalances in balance of payments, greater instability and risks of disintegration

- A EU investment plan could address these risk
Figure 1. World Manufacturing Value Added shares in 2013 and change in percentage points from 2008 to 2013.

Asia (including China and Japan) 46.4%
  China 23.2%
  Africa 1.9%
  Oceania 1.1%
  United States 17.6%
  Germany 6.3%
America (including United States) 25.7%
  Japan 7.8%
Europe (including Germany) 24.9%

Figure 3. Italy’s production in industry, volume index of production by technology
Monthly data, seasonally adjusted and adjusted by working days, 2007=100

3. The cohesion argument

The crisis and austerity policies have worsened:

- **Divergence among EU countries**
  (GDP, but also R&D, education, EU2020 goals)

- **Social disparities and income inequality**
  (asymmetric fall in jobs and incomes, impact of privatisations of public services, new intra-EU migrations, less social mobility)

Socially (and environmentally) oriented public investment could reverse these trends
Expansions are polarising, mostly in services
Contractions are reducing polarisation mostly in manufacturing
due to huge losses of lowest skills.
Gini index of inequality in household market incomes, 1985-2010

Gini index on equivalised household market incomes.
What does Europe already do?

- Europe2020
- Structural Funds and cohesion policy
- *Flagship initiative* “An integrated industrial policy for the globalisation era”, ‘Smart specialisations’
- Environmental actions and the Energy Union
- the European Investment Bank
- The European Fund for Strategic Investment and EIF
- Policies for attracting foreign investment
Juncker Plan

- Industrial compact and Juncker Plan start to acknowledge these problems
- No real EU priority and resources available
- 2 bn for Juncker Plan (should be 8bn + EIB + nat’l sources, then all turned into 315 bn)
- 1,300 projects costing a total of 2,000 billion: Potential and need for investment
Europe’s industrial policy

</tbody>
</table>
What the EU could do: a public investment plan

- Europe-wide investment plan
- 2% of Europe’s GDP (about EUR 260 billion) for a decade
- greater national policy space with a ‘golden rule’ for public investment.
- reduce the divergence between Europe’s centre and periphery, concentrate resources in weaker regions and weaker countries.
Funds

- Role for the ECB
- Long-term, high-risk public capital is needed to fund investment financial markets avoid
- Role of EIB
Key fields to be targeted

- environmental sustainability;
- appropriate ICT applications;
- health and public services (coherent with EU2020)
- innovative and efficient new economic activities employing high-skill, high-wage labour
- no focus on manufacturing alone, no focus on whole industries
Figure 8. A summary of the new European industrial policy proposed

**European Parliament**
- EU FUNDS 2% of GDP
  - EU tax income
  - For Eurozone: Eurobonds, ECB credit
  - Democratic debate on priorities, policy, implementation with national inputs

**European Commission**
- Anti-trust, Free trade
  - Antitrust not applied to Ind. Pol. actions
  - Stop TTIP and privatisation.
  - New policy space

**European Council**

**New European Industrial Policy**

**Supply:** Public R&D, inn., investm.
**Demand:** Mission oriented progr.

**Targeted fields:** Environ., ICT, Health
**Targeted periphery countries and regions**
**Possib. use of EIB, Structural Funds**
**Tools:** Strong public R&D system
- State provision of public goods
- State-initiated new productions
- Public investm. banks supporting firms
- Public procurement of R&D and prod.

**European agencies**
- National agencies, Publ. Investm.
- Banks, Local organisations
  - Natl. bodies receive EU funds, coordinate select, fund natl. and local projects of investm., production, services by public agencies and private firms

**EIB**
- More public oriented lending

**Regulation**
- Rules for industri. environm. etc. favouring local production, sustainability
  - **New policy space**

**Public Invest.**
- New role of public investm.

**Natl. Regul.**
- Possibility of variety.
  - Great. protection of food, environm., culture, etc.
Tools

- Greater general support for R&D, education, horizontal actions
- Public investment programmes,
- Public procurement
- Public enterprises,
- Support of private firms,
- Mission-oriented innovation programmes
- Link to environmental and other policies
Implementation

- Implemented at the national and regional levels, with bottom-up efforts and democratic processes
- Reinventing the governance of public-interest economic activities, political and social consensus
- Need for new arrangements for the governance of public interest economic activities,
- Transparency, monitoring, avoid collusion, corruption, waste
Papers on investment plans and industrial policy
